

I urge you to no allow BPL technology to be implemented at this time. I am concerned over the threat of broad radio frequency interference in the HF spectrum (3 MHz to 30 MHz). The HF spectrum is one resource that is shared and managed from a global perspective and used daily by many vital services worldwide. BPL threatens to pollute this natural resource and once in widespread use, it will be virtually impossible to reverse the ill effects. Also, there are other generally available sources of Internet connectivity including cable, DSL over telephone lines, and satellite transmission. These alternatives protect our HF radio frequency resources. BPL is harmful and not needed. Thank you. Signed, Ken Stovesand
